Woman thanks Dr. Solinsky for her eyesight

To the Editor:

In the beginning of 2009 I started to feel significant difficulties in vision when doing my art work. The eyeglasses did not help me anymore. I am a short-sighted person from my school years.

The small details in my painting and graphic arts were missing. Sometime they were vanished out from my sight field, fused or merged. I was not able to catch them with my pencil or brush.

My professional ability was reduced approximately by 50 percent or more. I asked for help in Dr. Solinsky's clinic. I was diagnosed and suggested to do "restore" surgery that was done at the end of 2009.

It was not enough words to describe my admiration and magnificent feeling when I see the world with both my eyes clear, beautiful, not limited with the frame of eye glasses.

My art, which I tried and could not finish month by month before the "restore," I finished in one day. It was marvelous feeling that I can do my favorite work in art again.

The art displayed here is "Old Jewish House in Old Jewish Shtetl" (Ukraine, Uman). Thank you Dr. Solinsky
